25. What is one of best techniques to convert normal changes into standard changes?

26. What is the command used to convert a container into an image?

27. The difference between GIT and SVN is?

Answers

1. Git is less preferred for handling extremely large files or frequently changing binary files while SVN can Handle multiple projects stored in the same repository.
2. GIT does not support commits across multiple branches or tags. Subversion allows the creation of folders at any location in the repository layout.
3. Gits are unchangeable, while Subversion allows committers to treat a tag as a branch and to create multiple revisions under a tag root.
4. None of the above
