| <ol> <li>Hibernate entity ca</li> <li>transient</li> </ol> | n be<br>B: detach      | ned C: persi           | stent D: all of the above                          |    |
| 2. When transaction of lose                                | completes, all the ass | sociated persistent ob | <mark>pjects still exis</mark> ts in memory but th | ey |
| their association with t                                   | he session on encou    | ntering one of the fo  | llowing method                                     |    |
| A: session.flush() B: tr                                   |                        |                        |  |    |
| D: none of the above                                       |                        |                        |  |    |
| 2. In hibernate, If the                                    | developer is not cert  | ain about the existen  | ce of the object. A: load() method                 | t  |
| should be used   |                        |                        |  |    |
| B: get() method should                                     | d be used              |                        |  |    |
| C: retrieve() method sh                                    |                        |                        |  |    |
| D: all the above are sar                                   | me with not much di    | fference.              |  |    |
| 3. One of the following                                    | g is not an interface  | from Hibernate core    | interfaces   |    |
| A: SessionFactory  | B: Session             | C: ConnectionF         |  |    |
| 4. Session interface d                                     | 005                    |                        |  |    |
| A: JDBC connection   | ues                    |                        |  |    |
| B: gets Transaction  |                        |                        |  |    |
| C: holds cache of persis                                   | stent ohiects          |                        |  |    |
| D: all of the above  |                        |                        |  |    |
|  | o manualak alamaan te  | do                     |  |    |
| 5. One of the following                                    | = -                    |                        | Dismon   |    |
| A: <bag></bag>   | B: <list></list>       | C: <set></set>         | D: <map></map>                                     |    |
| 6. Which statement is                                      | s wrong?               |                        |  |    |

A: HQL is case insensitive for class names and properties

B: SQL operates on relations, HQL operates on objects.

#### Web-based Java Programming

C: HQL is ultimately generated into underlying SQL. D: HQL supports polymorphic queries. 7. A join which combines result of both left and right outer join is A: Left Right Join B: Right Outer Join C: Full Join D: Left Join 8. Which class is used to create EntityManagerFactory? A: Persistence B: EntityManager C: EntityTranscation D: EntityFactory 9. One of the following is ORM implementation A: struts B: JSF C: hibernate D: spring 10. After EntityManager is closed, entity is in a \_\_\_\_ A: dead **B:** detached C: managed D: persistent 11. What is the root tag element in the hibernate configuration file? A: <hibernate-cfg> B: <hibernate-conf> C: <hibemate-configuration> D: <hibemate> 12. Once the hibernate session is closed, in which state the object remains? A: detached B: transient C: pesistent D: garbage collector 13. What is the root level element in hibernate mapping file? A: <hibernate-mapping> B: <session-mapping> C: <sessionfactory-mapping> D: None of the above 15. What does <generator-class="native"/> means? A: Generate primary key B: Generate tables based on configuration C: Generate sql statements on configuration D: None 16. What does hibernate.hbm2ddl.auto.create this means? A: Create tables automatically B: Create session object automatically C: Create session factory object automatically D: None. 17. Which statement is correct about Hibernate? A: The CacheMode controls how a particular session interacts with the second-level cache.

- B: The CacheMode doesn't control session interaction with the second-level cache. C: Both the above
- D: None of the above
- 18. When we integrate Hibernate via spring we don't need to take care of. A: SessionFactory
- **B**: Session
- C: Both a and b. (since there is something called as "HibernateTemplate" in spring)
- D: None of the above.

#### Web-based Java Programming

19. What is dirty checking in Hibernate?

A: object state changes in order to synchronize the updated state with the database B:

Remove the dirty data from data base.

C: Check the data when insert into data base. D:

None

20. What is the root level element in a hibernate mapping file?

A: < hibernate-mapping> B: <session-mapping>

C: < sessionfactory-mapping> D: none of the above

21. What does session.evict() method do?

A: remove the object and its collections from the first level cache

B: remove the object and its collections from the second level cache

C: remove the object and its collections from the data base D:

None of the above

22. What does hibernate.hbm2ddl.auto create this means?

A: create session object automatically

B: create tables automatically

C: create Session Factory object automatically D:

None

23. Is Hibernate Session threadsafe?

A: Yes B: no C: no relation with thread D: none

24. Which 2nd level cache is better in hibernate?

A: EHCache B: GumoCache C: DASCache D: TestCache

25. Which statement is correct about session.load()?

A: load() will return null if there is no matching database row.

B: load() will throw an unrecoverable exception if there is no matching database row. C:

None of the above.

26. Which of the following is tag of hibernate.cfg.xml?

A: SQL variant to generate B: Size of the database C: All of the above D: None of the above

27. How do we get a session object?

A: SessionFactory.get(); B: (session)SessionFactory.getObject();

C: SessionFactory.getSession(); D: SessionFactory.openSession();

28. How to enable query cache in hibernate?

A: hibernate.cache.query cache true B: hibernate.cache.use\_query\_cache true

C: hibernate.cache.query cache yes D: none

29. What does session.delete() do?

#### Web-based Java Programming

A: remove from sessionFactory B: remove data from in momery. C: remove from database. D: All of the above. 30. The hibernate configuration file name is? A: http.conf B: web.config C: persistence.xml D: hibernate.cfg.xml 31. Load child object automatically when parent object is loaded? A: lazy=yes B: lazy=false C: lazy=true D: lazy=no 32. In order to create new session which function should be used? A: getSession(true) B: getSession() C: both A and B D: getSession(false); 33. Which of the following is true? A: Hibernate is a framework B: Hibernate is an Object-Relational mapping (ORM) library for the java language. C: Hibernate provides mapping for object-oriented domain model to a traditional relational database. D: All of the above. 34. There are core interfaces that are used in just about every hibernate application. Using these interfaces, you can store and retrieve persistent object and control transactions. Select all the interfaces that you see. A: Configuration interface B: Query and Criteria interfaces C: All of the above D: None of the above 35. Which of the following is not hibernate session method? A: Save () B: remove () C: persist () D: load () 36. If the validation fails what will be returned by the validate () method? A: Success B: input C: login D: error JDBC 1. Which of the following code will you use to get a count of the columns in the result? A. ResultMetaData rsmd=DatabaseMetaData.getMetaData(); int columns=rsmd.getColumnCount(); B: ResultSetMetaData rsmd=new ResultSetMetaData(result); int columns=rsmd.getColumnCount(); C: ResultSetMetaData rsmd=result.getMetaData(); int columns=rsmd.getColumnCount(); D: DatabaseMetaData md=result.getMetaData(); int columns=md.getColumnCount(); 2. The Jdbc driver that directly communicates with database protocol is A: Type I B: Type II C: Type III D: Type IV

3. What will the following line of code do? Class.forName("sun.jdbc.odbc.JdbcOdbcDriver");

A: Load the Driver for Database access

- B: Establish a connection with the specified database
- C: Accesses data from a table
- D: Create a ResultSet object

| 22. The checked exceptior<br>A: None of these  | n which we need to ha<br>B: <b>SQLException</b>  |   | ase of jdbc is<br>C: IOException  | D: JDBCException           |
| 23. Type1 driver makes us<br>A: None of these  | e of<br>B: <b>Odbc</b>   | C: Jdbc                                       |   | D: Middleware              |
| 24. If ResultSet is Scrollab<br>A: Absolute  | le we can invoke<br>B: Next  | C: Previ                                      | ous   | D: all of the above        |
| 25. Stored Procedures car  | n be called using  |   |   |                            |
| A: PreparedStatement   | B: Statement   | •   | C: CallableStatement  | D: None of these           |
| 26. One of the following is<br>A: Connection   | s a class<br>B: Statement  | (   | C: ResultSet  | D: none of the above       |

27. Every driver class has \_\_\_\_\_ which registers itself with the DriverManager

#### Web-based Java Programming

B: static block D: none of the above A: Static method C: constructor **JSF** 1. Front Controller in JSF is A: DispatcherServlet B: ActionServlet C: FacesServlet D: none of the above 2. Configuration file in JSF is A: webconfig.xml B: jsf-config.xml C: applicationContext.xml D: none of the above [it is "faces-config.xml"] 3. Annotation which is used to define bean in JSF is A: @managedBean B: @Bean C: @Component D: @JSFBean 4. In case of JSF component tree is stored inside A: ServletContext B: ApplicationContext C: FacesContext D: None of the above **JSP**  Which of the attribute of JSP mentioned below is not available in servlet? B: session A: request C: page D: context 2. A method can be defined inside A: JSP scriptlet **B: JSP declaration** C: JSP expression D: none of the above 3. One of the following cannot be overridden while writing JSP page A: \_jspService B: jsplnit C: JspDestroy D: jspService 4. Which attribute cannot be used inside <jsp:useBean> B: id A: class C: name D: scope 5. If we want to include some dynamic page in JSP we should use A: <jsp:include page="/somepage"/> B: <%@ include file="/somefile" %> C: RequestDispatcher rd=request.getRequestDispatcher("/somepage"); rd.include(request,response); D: none of the above 6. One of the following JSTL tag performs URL rewriting. A: link B: url C: aHref D: import 7. Given <jsp:useBean id="a1" scope="request" class="mypack.Customer"/> What is the syntax to read Customer object? A: \${requestScope.a1} B: <%=request.getAttribute("a1")%> C: \${a1} D: all the above

8. Which JSP expression tag will print the context initialization parameter named "uname"?

A: <%= application.getAttribute("uname")%>

7

#### Web-based Java Programming

B: <%= application.getInitParameter("uname")%>
C: <%= request.getParameter("uname")%> D:
<%=contextParam.get("uname")%>

9. When a JSP page is compiled, what is it turned into?

A: Applet B: Servlet C: Application D: Mailet

10. The implicit JSP objects like request, response, and out are only visible in the \_jspService() method.

A: True B: False

11. To fill up all bean properties with HTML form elements which of the following statements can be used,

A: <jsp:synchronize name="BeanName" />

B: <jsp:setProperty name="BeanName" property="" />

C: <jsp:setProperty name="BeanName" property="\*" />

D: <jsp:setProperty name="BeanName" property="All" />

12. Why use RequestDispatcher to forward a request to another resource, instead of using a sendRedirect?

A: Redirects are no longer supported in the current servlet API.

B: Redirects are not a cross-platform portable mechanism C:The

RequestDispatcher does not use the reflection API.

D:The RequestDispatcher does not require a round trip to the client, and thus is more efficient and allows the server to maintain request state.

13. The attribute which defines your jsp page as a exception handling page is

A: isExceptionPage B: exceptionPage C: isErrorPage D: w. errorPage

14. To use the ServletContext in Jsp the implicit object is

A: Application B: context C: Config D: page

15. Which attribute can be used inside <jsp:setProperty> and <jsp:getProperty>

A: class B: id C: name D: scope

16. What is the role of J2EE container in web application?

A: It provide the life-cycle. B: It compiles the JSP. C:

Loads the classes of the JSP and servlet. D: All of the above

17. How can we enable session tracking for JSP PAGES?

A: Enable cookies in the browser

B: set session attribute value is true in page directive

C: set is Session attribute true in page directive D:

Enable session tracking in the browser

18. What is the effect of executing the following JSP statement, assuming a class with name Employee exists in class's package?

<%@ page import = "classes.Employee" %>

#### Web-based Java Programming

<jsp:useBean id="employee" class="classes.Employee" scope="session"/>
<jsp:setPropertv name="employee" property="\*"/>

A: The code does not compile as there is no properly attribute of setProperty tag.

B: The code does not compile as property attribute cannot take \* as a value.

C: The code sets value of all properties of employee bean to "\*".

D: The code sets the values of all properties of employee bean to matching parameters in request object.

19. If a JSP page overrides the jsplnit() method using a declaration JSP tag, which phase of the JSP page life-cycle generates the overridden method in the servlet?

A: page translation. B: JSP page compilation. C: call jsplnit() D: call\_jspService().

20. <jsp:useBean id="a1" scope="request"class="mypack.Customer"./> What is the syntax to read Customer object?

riram Mantri

A: \${requestScope.a1}

B: <%=request.getAttribute("a1")%> C:

\${a1}

D: All the above

21. Which method can be overridden while writing JSP page

A: jspInit B: JspDestroy C: A and B both D: None of the above

22. The implicit object "out" of Jsp is of type

A: PrintWriter B: InputStream C: JspWriter D: JspPrintWriter

23. Two of the following are the attributes of <%taglib%> directive.

A: Name B: prefix C: value D: uri E: url

24. The attribute which informs container about a particular error jsp page is

A: isExceptionPage B: exceptionPage C: isErrorPage D: errorPage

25. Which of the following is true for JavaBean?

A: It cannot be a GUI component.

B: It never implement Serializable interface

C: It has Zero argument constructor

D: It is a distributed component

26. if a jsp page overrides the jspInit method using a declaration JSP tag , which phase of the jsp page lifecycle generates the overridden method in servlet?

A: Page translation B: JSP page compilation C: call jspInit() D: call \_jspService()

27. Select the correct statement about following code (Select one)

<%@page language="java"%>

<html><body>

<% response.getOutputStream().print("hello");</pre>

out.print("World");

#### Web-based Java Programming

%>

</body></html>

A: It will print "hello World" in the output

B: It will generate compile time errors

C: It will throw runtime exceptions (java.lang.lllegalStateException: getOutputStream() has already been called for this response)

D: It will only print "hello"

28. Which is not a valid scope for javabean in JSP?

A: Page

B: session

C: request

D: global

29. Which among the following will compile?

A: <% int x=10 %>

B: <%= "hello how are you" %>

C: <%= "hello"; %>

D: <%! Int x=10 %>

30. Which of the following statements is true regarding the scope of "request" in JSP?

A: Objects with request scope are accessible from pages processing the same request where they were created.

B: All references to the object shall be released after the request is processed: in particular if the request is forwarded to a resource in the same runtime, the object is still reachable.

C: References to the objects in request scope are stored in a request object. **D:** All of the above.

- 31. Which of the following statements makes your compiled JSP page implement the SingleThreadModel interface?
- A: <%@ page isThreadSafe="false" %>
- B: <%@ page isThreadSafe="true" %>
- 32. How can a servlet call a JSP error page?
- A: This capability is not supported
- B: When the servlet throws the exception, it will automatically be caught by the calling JSP page. C: The servlet needs to forward the request to the specific error page URL. The exception is passed along as an attribute named "javax.servlet.jsp.jspException"
- D: The servlet needs to redirect the response to the specific error page, saving the exception off in a cookie.
- 33. When using a JavaBean to get all the parameters from a form, what must the property be set to (???

in the following code) for automatic initialization?

<jsp:useBean id="fBean" class="govi.FormBean" scope="request"/>

<jsp:setProperty name="fBean" property="???" />

<jsp:forward page="/servlet/JSP2Servlet" />

A: \*

B: All

C: @

D: =

### Web-based Java Programming

34. Choose the statement that best describes the relationship between JSP and servlets:

A: Servlets are built on JSP semantics and all servlets are compiled to JSP pages for runtime usage. b. JSP and servlets are unrelated technologies.

B: Servlets and JSP are competing technologies for handling web requests. Servlets are being superseded by JSP, which is preferred. The two technologies are not useful in combination.

| •  | , which is preferred. T<br>n servlet semantics ar  | ū  |                                  |  |          |

Web-based Java Programming

#### **SERVLET**

| 1. | Select | the | correct | statement |
|----|--------|-----|---------|-----------|
|    |        |     |         |           |

A: ServletConfig is not available inside constructor

B: servlet gets instantiated every time a new request comes.

C: programmer has to override "service()" method of parent class D:

GenericServlet is a concrete class

2. One of the following is not a Parameter

A: init B: request C: session D: context

3. In order to retrieve existing session only [not to create new] which function should be used?

A: getSession(true) B: getSession()

C: getSession(false) D: all of the above

4. Select wrong statement

A: forward is faster than redirect

B: redirect is only within the same context

C: if client does not accept cookies, URLRewriting is the best option you have. D: cookies are internally used inside session mechanism.

5. Cookies are always added to?

A: Request

**B:** Response

C: Session

D: r.Application

6. Select the wrong statement

A: ServletConfig is not available inside constructor

B: servlet gets instantiated every time a new request comes.

C: programmer need not override "service()" method of parent class, instead he can override required doXXX() methods.

D: GenericServlet is abstract class

7. One of the following is not an attribute

A: init B: request C: session D: context

8. Which of the following variables are thread-safe?

A: session-scoped

B: application-scoped

C: servlet instance

D: request-scoped

9. Technique for maintaining anonymous user transaction on web

A: cookies B: URL Rewriting C: session D: all of the above

### Web-based Java Programming

| 10. One of   | t the following is   | not a serviet attribute   |  |   |
|--|--|---|--|---|
| A: config  | B: context   | C: request  | D: session   |   |

16. You want to use URL rewriting to support client browsers, which do not use cookies. Which method will you use to attach the session id to a URL that is to be used for the sendRedirect() method of the

HttpServletResponse?

D: javax.servlet..http.HttpSession

A: encodeURL

HttpServlet

A: ClientRequest B:

C: HttpServletRequest

#### Web-based Java Programming

B: encodeRedirectURL

C: encodeSessionURL

D: encodeSessionRedirectURL

17. Given that the service() method of a typical servlet is multithreaded, which one of the following issues does NOT need to be addressed in a servlet's implementation?

A: Concurrent access to shared resources

B: Concurrent access to local variables

C: Concurrent access to static variables

D: Concurrent access to instance variables

18. \_\_\_\_\_ is the object used for reading "init" or "config" parameters.

A: ServletContext

**B:** ServletConfig

C: RequestDispatcher

19. Request parameters are set

A: in DD

B: using setParameter

C: implicitly

20. In case of redirect request is same. False

21. Following methods are the part of servlet lifecycle. [Choose 3 correct answers]

A: Start B:

init C: stop

D: service

E: destroy

22. In case of servlet, for each request

A: each thread is created

B: each process is created

C: none of them

23. Container adds cookies inside

A: Response

B: request

C: context

D: config

24. If the request is get

A: service() calls "doPost()" method C: container directly calls "doGet()"

B: service() calls "doGet()" D: doGet() calls "service()"

25. One of the followings is must for a servlet class

A: it must override "service()" method

B: it must have parameterized constructor

C: it must have public no-arg

constructor D: it must implement

Serializable interface.

26. Redirect can go beyond the context. True

27. HttpSession session =request.getSession()

A: Can create a new session only

B: can retrieve an existing session only

C: Can either create a new or retrieve an existing session, depends upon session availability.

#### Web-based Java Programming

- 28. Following interface is used to either forward or include other web resource. A:
  - Servlet B: RequestDispatcher C: ServletConfig D: HttpResponse
- 29. Besides the cookie object which other object is also required to create a cookie on the browser?
  - A: Request
  - **B**: Response
  - C: Session
  - D: Application
- 30. The limitations of Cookies are
- A: 20 cookies per site each of max 4Kb
- B: 4 cookies per site each of max 20Kb
- C: Any no of cookies per site each of max 4Kb
- D: No limitation
- 31. Select correct statement
- A: forward is faster than redirect
- B: redirect has always a same request.
- C: if client does not accept cookies , session mechanism is not possible at all. D: cookies can store java objects.
- 32. Your web application named bank uses "WelcomeServlet". Where will u store "WelcomeServlet.class"? A: bank/WEB-INF/classes
- B: bank/WEB-INF/lib/classes
- C: root/WEB-INF/lib
- D: bank/WebContent/lib/classes
- 33. What method can be used to retrieve value of the request parameter being sent as a part of the request by client?
- A: Use the method "HttpServletRequest.getParameter(string name) which will return String form.
- B: Use the method "HttpServletRequest.getParameterValues() which will return array of String values. C: Use the method "HttpServletResponse.getValues()" which will return array of string values.
- D: There is no direct support in servlet api.
- 34. Which of these true about deployment descriptor?
- A: The order of elements in deployment descriptor is important. The elements must follow a specific order.
- B: The servlet-mapping element if present must be defined within "servlet" element.
- C: The elements of deployment descriptor are not case insensitive. D:

The web-app element must include the servlet element.

- 35. If the HTTP error 500 is generated by your servlet, you do not want to show the "Internal Server Error" page to the client. Instead, you want a custom error page to be displayed. What is the best way to accomplish this?
- A: Forward the user to the error page using HttpServletResponse.sendRedirect() method.
- B: Forward the user to the error page using RequestDispatcher.forward() method.

#### Web-based Java Programming

C: Specify the mapping of the error-code 500 and the error-page in the deployment descriptor. D: It is not possible to accomplish this.

36. Which of the following should not be used to share data between servlets in a distributed web application?

A: Attributes of ServletContext

B: Enterprise JavaBeans

C: Attributes of HttpSession

D: Database

37. You want to use URL Rewriting to support client browsers which do not use cookies. Which method will you use to attach the session id to a url that is to be used for the "sendRedirect()" method of the HttpServletResponse?

A: encodeURL B: encodeRedirectURL

C: encodeSessionURL D: encodeSessionRedirectURL

38. What is the main difference between servlet and cgi?

A: Servlets are thread based, cgi are process based

B: Servlets execute slower compare to cgi

C: Servlets have no platform specific API, whereas cgi has D:

All of the above

39. A user types the URL http://www.cdac.in\_which Http request gets generated? A: GET method B: POST method C: HEAD method D: PUT method

40. Which object is used to forward the request processing from one servlet to another?

A: ServletContext

B: ServletConfig

C: RequestDispatcher

D:

ResponseDispatcher

41. The method getWriter() returns an object of type PrintWriter. This class has println() method to generate output. Which of these classes define the getWriter method? Select the one correct answer.

A: HttpServletRequest

**B: HttpServletResponse** 

C: ServletContext

D: ServletConfig

42. Which of the following statements is correct?

A: The response from the dedicated server to a HEAD request consists of status line, content type and the document.

B: The response from the server to a GET request does not contain a document.

C: The setStatus method defined in the HttpServletRequest class takes int as an argument and sets the status of Http response.

D: The HttpServletResponse defines constants like SC\_NOT\_FOUND that may be used as a parameter to setStatus method.

43. Which of the following method is not used to reterive request parameters

# Web-based Java Programming

| A: getParameterNames() B: getParameter()  C: getParameterValue()  D: None of the Above  |
|---|
| 44. Redirect cannot go beyond context. False  |
| 45. Lifecycle methods of filters are [select 3 correct answers] A: init B: service C: destroy D: doFilter E: intercept  |
| 46. If the request method is "get", which method is called  A: DoGet B: DoPut C: DoPost D: DoDelete   |
| <ul> <li>47. Select the correct statement.</li> <li>A: Servlet is multithreaded</li> <li>B: HttpServlet extends GenericServlet</li> <li>C: CGI creates different process for each request</li> <li>D: all of the above</li> </ul> |
| 48. In order to make Servlet entry inside DD, we need to mention  A: Servlet-Class B: Servlet-name C: URL-pattern D: All of these   |
| 49. Request and response are created for each thread A: False B: True   |
| 50. One of the following is one per servlet A: Request B: Config C: Context D: All of these   |
| 51. Life cycle method in case of servlet is A: Destroy B: Service C: Init D: all of these   |
| 52. Service method is declared as throws A: ServletException B: IOException C: both a and b D: none of these  |
| 53. DD is A: Config.xml B: None of these C: Webconfig.xml D: Web.xml  |
| 54. getWriter() method is invoked on  A: Request B: Config C: Response D: context   |
| 55. HttpServlet class is abstract class A: False B: <b>True</b>   |
| 56. Request Dispatcher reference can be used for forward as well as include A: False B: <b>True</b>   |

57. One of the following is invoked for every request

| A: Constructor  | B: Service                   | C: Destroy      | D: Init   |               |                  |
|---|------------------------------|-----------------|---|---------------|------------------|

15. In order to use @Component annotation for a bean u need to add following tag in Spring bean configuration file.

A: <context:component-scan>

B: <auto:component-scan>

#### Web-based Java Programming

D: None of the above

16. What is the Key strategy of spring framework?

A: Application development in POJO style.

B: Loose coupling through Dl.

C: Declarative programming using AOP D:

All of the above.

#### **SWING**

Mantri

1. Select correct statement from the following

A: Invisible components are required in BoxLayout

B: flowlayout is the default layout for JApplet

C: the default lookandfeel for swing components is MotifLookAndFeel. D: swing does not have DelegationEvent model.

2. How will you create Dual Application in Swing? A: extend JFrame, inside main instantiate JApplet

B: extend JApplet, inside main instantiate JFame

C: extend JFrame as well as JApplet

D: none of these
